

### Project Overview

260 kW Capstone Microturbine CHP System was commissioned in October 2018, has been producing heat and power to the facility ever since.

1,450,000 KWH GENERATED SINCE  
DECEMBER 2018

238,000 CUBIC METRES OF NATURAL GAS  
OFFSET

58% REDUCTION IN ELECTRICITY USAGE  
PER MONTH

PROVIDES EMERGENCY BACKUP POWER  
DURING POWER OUTAGES

The 260 kW Capstone Microturbine CHP System was commissioned in October 2018, and will act as an emergency backup generator for the building, while also supplying electricity and heat. The system increases the energy efficiency of the building, while providing a return on investment on a backup generator.
